LogBook

Members Teams:

- Andrea Margarita Mendoza Tec
- Arturo Andres Quezada Suarez
- Francisco Ramos Aleman
- Ileana Gabriela Castillo Sánchez
- Luis Alejandro Cruz Inzunza

Reasons for Meeting:

- Habitual Team Meeting
- Supervisor Meeting
- Extra Meeting

Meet the team 02/sep

- We got to know each other as a team and those who have experience in this "project" program commented on how it works.

- We agreed to have a meeting on Monday to have more detailed tools and problems that we can focus on to carry out a solution as a project.

Monday 05/sep

▶ We defined the tools and work methodology we would use to complete the project.

▶ We released the news that one member of the team would no longer be with us and we would now be a team of 5.

Supervisor meet 07/sep

- We talked about the problem of a client we encountered, in which he gave the go-ahead to give it enough attention and carry it out as a project.

- He mentioned the importance that the whole team should talk to the client and be more in the context of the problem.

Thursday 08/sep

- We are planning to document the whole problem on Friday 09/sep. It has been difficult for us to see the client among the whole team.

Documentation 09/sep

- Arturo told us everything about the client's problem so that we could all be on the same level of knowledge, creating a document with everything written down to send to the client for approval and not overlook anything.

Monday 12/sep

- Francisco made some requirements based on the previous call, we discussed among the team how well-informed we all were, so we even considered going to see the client in person. It was terminated taking into account the wait for a scheduled date and a recapitulation from Luis about the whole problem to be solved.

Monday 19/sep

- Andrea made a case diagram based on the specifications and document given by Arturo and approved by the client.

Monday 26/sep

- Having some artifacts done, we made revisions to the requirements and scheduled a meeting with our supervisor for tomorrow.

Tuesday 27/sep

▶ Instead of a case diagram, we ended up making a flowchart, so we have to create that artifact again. At least it is understood that the problem is being abstracted in a good way.

▶ Imperfect requirements, need to be improved.

Thursday 29/sep

- In order to improve both the diagram and the requirements, each of the members conducted research on what they are and how to improve both the diagram and the requirements.

Saturday 01/oct

- All the members joined a call so that each one of them could show their research about what is and how to make the diagrams and requirements, to solve doubts and to know how to make them.

Monday 03/oct

- We plan the time to do each of the necessary things for the first delivery in order not to delay the completion of the project.

Tuesday 06/oct

- A first version of the script for the video to be presented for the first installment was started.

Saturday 08/oct

- Realization another class diagram different from the one we had, already having the concepts of relationship and form of representation more studied.(Andrea y Luis)

Thursday 13/oct

- We reviewed the last details of the class diagram, requirements, and the script for the realization of the video.(todo el equipo)

Tuesday 11/oct

- Checamos las historias de usuarios para tener una abstracción primeriza idónea para su representación de diagrama de clases y requerimientos.(Ileana y Luis)

Thursday 13/oct

- In-person meeting. We all reviewed the missing artifacts for the complete delivery of our supervisor's metrics.
